Executive Summary of Requirements

REQUIREMENT: what is this about?

This appears to be the rulebook for a venturethon event, specifically focused on Generative AI & Automation. The rules outline the expectations for participant conduct, originality, and plagiarism, as well as the guidelines for submissions, including the use of open-source libraries and AI-generated code. The primary objective is to ensure that all work submitted is substantially developed by the team during the event period, with proper crediting and respect for existing intellectual property.
